

Demand Forecasting System

From manual spreadsheets to an automated, self-learning forecast — sharper numbers, faster planning, better stock decisions.

Automated

Accurate ~90%

Days → minutes

Built for: Commercial · Marketing · Demand Planning · Management

What This Project Sets Out To Do

Automate the forecast

The system produces demand numbers on its own — no manual spreadsheets each cycle.

Reduce human error

Consistent, repeatable results — guesswork and manual slips removed.

Increase accuracy

Sharper forecasts → the right quantity, fewer surprises.

Speed up planning

What took days of work now takes minutes.

Optimise stock & cash

Fewer stock-outs and less overstock — free up working capital.

Scale across the catalogue

One consistent method for all ~400 SKUs, every cycle.

What Every Team Gains

Sales Team

- Sales projection by SKU & brand
- Spot trends & declines early
- What-if view for promotions
- A reliable number to plan around

Marketing (MKT)

- Seasonality & demand view
- Promotion effectiveness
- Impact of price changes
- Pre-launch demand for new products

Demand Planning (DP)

- Higher forecast accuracy
- Automated — far less manual work
- Smart replenishment, right quantity
- Fewer stock-outs & overstock

Management

- One source of truth across teams
- Accuracy & KPIs at a glance
- Better working-capital decisions
- Confidence to scale company-wide

From Manual Effort To Automated Planning

Today — done by hand

- Forecast built manually in spreadsheets
- Inventory reviewed by hand
- Purchase orders raised manually
- Slow — days per cycle
- Varies by person; hard to repeat

Future — done by the system

- System generates the forecast
- Low-stock items flagged automatically
- Order quantity suggested for you
- Fast — minutes per cycle
- Consistent, and reacts to promos & price

2 days → 30 min

forecast preparation

~90%

demand accuracy

150 → 400+

SKUs covered

What Goes Into The Forecast

Sales history & inventory

4 years of sales + stock, pulled fresh

Product master list

Every SKU with details & lifecycle status

Shipments & goods received

Incoming stock and what has arrived

Supplier lead times & MOQ

How long to restock, and order sizes

What the system pays attention to

- Core sales momentum
- Seasonal & calendar curves (e.g. Khmer New Year)
- Promotions & price moves
- Brand growth
- Current stock levels
- Category interdependence
- Out-of-stock correction
- New-product analogs & repack continuity

Four Simple Steps – Plus It Keeps Improving

Learns from the past

Studies years of sales trends and buying behaviour.

6 specialist engines

Each product type gets the method that fits it best.

Produces a forecast

A clear demand number for every SKU, 12 months ahead.

Planner validates

A human reviews, approves, and executes the order.

Explains every number

You can see why the system forecast what it did.

Gets smarter each cycle

Compares forecast vs actual and tunes itself.

Where We Are, And What's Next

PROVEN SO FAR

~90%

accuracy on core items

400+

SKUs forecast automatically

specialist engines live

Pilot first: prove it on one principle — “PepsiCo” — through a 3-month test run before going live.

What We Need From You

Demand Planning

- Lead time (baseline) per supplier
- Container fit & minimum order qty
- Target stock cover / safety days
- Discontinuation list

Marketing (MKT)

- Future price changes (dates & sizes)
- Promotion plan / calendar ahead of time
- Planned new launches & repacks
- Campaign timing

Commercial

- Sales targets & budgets
- Known large / customer orders
- Market & competitor events
- Channel expansion plans

Why it matters: these inputs make the forecast sharper and let the system react before demand shifts — not after.
